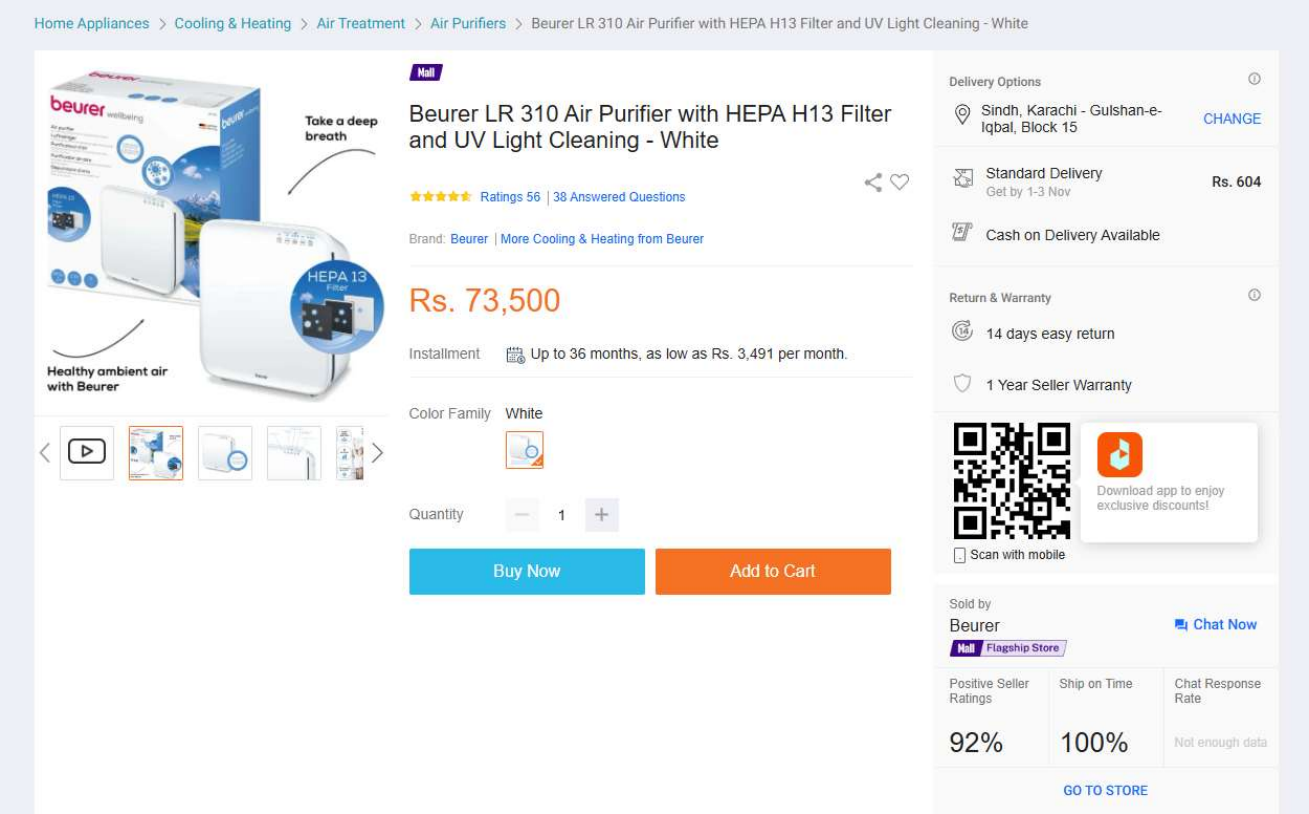
Time Allowed:	**2.5 Hours**			**Maximum Marks:**	**50**		
Student's Name:				Reg. No.			

Important Instructions / Guidelines:
For name of the file that you upload, use format **<your registration number>-<your name>.zip**
All CSS and HTML should be in a single file named, <your registration number>.html

Question 1:

<CLO 4> Apply the concepts of markup & scripting languages and client-side technologies.

Create product page for an ecommerce store. Below image shows daraz.pk product page:



Please check product page of 4-5 different e-commerce stores to get ideas about what and how different information is displayed to make it easy for users to explore and evaluate the product. In addition to above information, your product page shall display following information:

1. Product text specification

2. Availability (In stock, Out of stock)
3. Size (Small, Medium, and Large) – may not be applicable to all products.
4. Standard price and discounted price
5. 3 Reviews (star rating, customer name, date and time posted and comments)

Above given design is very content rich but page design is very classical. Please create yourself or mimic a modern looking page. You can select any ecommerce store of any country.

1. Create a new web page that shall display all above mentioned and displayed information. Your page may have 2 or 3 columns. Page width should be 1300px (just a recommendation), it should be centered aligned. Which information to display in which column, decide yourself. **(20 Marks)**

2. Your page should follow good design to make it easy to read, explore and evaluate the product. Creating a unique design is not required. You can pick a store and follow its design. Make use of different icons etc. to make it UI appealing. (The store selection should be your own and private and it should not match with other students' work. It's recommended to use online images to keep the total size of work done low). **(20 Marks)**

3. The page should follow mobile first design, for 700px and below view ports, columns should vertical stack. **(10 Marks)**

Note: Your work, fully or partially, should not match with any other students' work. In such case, both students would get 0 marks and I reserve the right to file UMC too. So, please do not take risk and focus on doing your own work.

Good Luck !
